In this document, you can find the feedback received from the Prototype showcase.

**Feedback 1**

It's really cool

**Feedback 2**

More relatable explanation because there are a lot of technical terms that someone with less experience would understand and comprehend.

**Feedback 3**

Like the instruction video. It looks super cool.

**Feedback 4**

It looks clean like a final product. Next step for the project.

The presentation and visuals are clean and professional.

**Feedback 5**

What is the next step for the project and how do we plan to continue and iterate on this.

**Feedback 6**

How would we display or transfer the information to the client or others.

Adding and removing different elements to make the scene more dynamic.

Maybe using Pixel Playground to see how it looks like on a big screen.

How-To video should be less text heavy. Maybe research how-to videos that explain difficult topics in a short video. This is so we can take inspiration for this.

Different methods of display for when showcasing the information.

Have a script when presenting so that we can better explain the goal and everything else.

**Feedback 7**

Like the texture of photogrammetry.

 Asked about the camera that was used.

**Feedback 8**

Cool result and next goal question.

**Feedback 9**

I like the video cinematic, how-to video is a more fun visual product and way to understand the project.

**Feedback 10**

Camera or Phone preference question.

Have a talk with the company about user rights and how that will be used to move forward.

Make the cinematic video slower to be cautious of people that cannot handle fast shafting visuals.
